Education

Dai Hoc Mo Ha Noi

HOU

Bachelor of Information Technology, Software Engineering. Thesis: Online Ride-Hailing Platform Development

Relevant Coursework: UI|UX Design, Web Design, Web Programming.

Experience

TCOM CORP

Thanh Xuan, Ha Noi

Frontend Developer Intern

Mar 2024 – May 2024

- Collaborated with QA/QC and business teams to analyze requirements, understand fulfillment workflows, and support feature implementation.
- Developed and maintained 10+ reusable UI components using ReactJS, TypeScript, Ant Design, and SASS, improving development efficiency and interface consistency.
- Integrated RESTful APIs using Axios and TanStack Query for data fetching, caching, and state synchronization across multiple screens.
- Resolved 20+ UI bugs and enhancement requests reported by PM and QA teams, ensuring on-time delivery of assigned tasks.
- Participated in GitLab code review processes, incorporating feedback to improve code quality, maintainability, and team collaboration.
- Contributed proposals for UI/UX improvements, helping optimize user interaction flows and interface usability.
- Researched technical documentation and business requirements to investigate project issues and propose feasible solutions.
- Improved task estimation accuracy, sprint progress reporting, and understanding of Agile/Scrum development workflows through active participation in team activities.

Technologies: ReactJS, TypeScript, Ant Design, SASS, TanStack Query, Axios, RESTful API, GitLab, NPM.

FullStack Developer

Aug 2024 – Present

- Ziraiten (Full-stack): Built and integrated a Stripe Payment Gateway (webhook handling, transaction processing, reconciliation) on the NestJS backend; developed the frontend with ReactJS, resolving issues related to pagination, responsive UI, and bundle optimization (code splitting, lazy loading).
- INBID (Frontend): Developed a real-time bidding interface using ReactJS, implemented WebSocket for real-time data updates (live bidding, notifications); managed state and synchronized order data with Redux Toolkit; integrated third-party APIs/SDKs (Instagram Graph API, Facebook SDK, Stripe API).
- CowaTech (Full-stack): Built RESTful APIs with NestJS for authentication/authorization and role-based access control (RBAC); developed the frontend using ReactJS, Redux Toolkit, Tailwind CSS, and Bootstrap; ensured seamless API integration between client and server.
- ERP - Attendance Management (Frontend): Developed timesheet, leave approval workflow, and report export (Excel/PDF export) modules using ReactJS; handled complex business logic involving timezone conversion and holiday calendar calculations.
- ChaTask (Frontend): Designed and implemented a Kanban-style board view, advanced filtering, and a real-time notification system via Socket.IO; leveraged TypeScript for type safety and TanStack Query (React Query) to optimize data fetching, caching, and server state management.
- Festaria CloudMD (Full-stack): Built backend business logic with Java Spring Boot for order processing, CRUD operations for product management, and inventory synchronization; developed the frontend using HTML/JavaScript for multi-step forms, optimizing UX and form validation.

- Built reusable components (FE) and shared services/middleware/DTO validation (BE) following a modular architecture, reducing code duplication and improving maintainability across projects.
- Collaborated with PMs, QA/QC, and cross-functional teams throughout the full SDLC (Software Development Life Cycle): requirement analysis, API design, effort estimation, development, code review, unit/integration testing, and deployment.

Technologies: ReactJS, TypeScript, Redux Toolkit, TanStack Query, Ant Design, Tailwind CSS, Bootstrap, Socket.IO, WebSocket, Axios, RESTful API, Stripe, GitLab.

Projects

GO-RIDE – Bus Ticket Booking System

May 2026 – Present

- Developed a bus ticket booking platform supporting trip search, seat selection, booking management, and simulated payment workflows.
- Managed booking state using Redux Toolkit and optimized server-state synchronization with TanStack Query.
- Built responsive user interfaces with ReactJS, Ant Design, and SASS.
- Implemented route and date filtering features to improve trip discovery experience.

Technologies: ReactJS, Redux Toolkit, TanStack Query, Ant Design, SASS.

MVL Logistics – Corporate Landing Page

Jun 2026 – Present

- Developed a responsive landing page introducing logistics services, pricing plans, FAQ, and contact features.
- Integrated form validation and API communication using Axios and TanStack Query.
- Applied CSS Modules and SASS for maintainable component-based styling.

Technologies: ReactJS, TanStack Query, Axios, SASS, CSS Modules.

Skills

Frontend: ReactJS, TypeScript, JavaScript (ES6+), HTML5, CSS3, SASS, Tailwind CSS, Bootstrap, Ant Design.

State Management: Redux Toolkit, TanStack Query.

Backend: Node.js, NestJS, Java, Spring Boot, RESTful API Design, WebSocket, Socket.IO.

Database: MySQL.

Backend Integration: Axios, JWT Authentication, Role-Based Access Control (RBAC), Stripe Integration, Webhook Handling.

Tools: Git, GitLab, GitHub, NPM, Yarn, Vite, Postman, Ngrok.

Methodologies: Agile/Scrum, Code Review, Requirement Analysis, Task Estimation, SDLC.

Languages: Vietnamese (Native), English (Reading Technical Documentation).
